Smart Waste Management System for Metropolitan Cities

DESIGN AN WEB PAGE:

PARAMETERS ARE:
1. DISTANCE
2. WEIGHT

PROJECT MODEL:

The ultrasonic sonic sensor and the weight sensor which are used to calculate the garbage distance and the weight respectively.

There are certain assumptions assumed by us, They are
O The length of the trash can is assumed to be 200 cm.
o The maximum weight of the can is assumed to be 2 Kg.
o If the garbage distance goes more than 180cm i.e, more than 90% of the trash can, the sensor has to send to send an alert to the garbage collector.
o If the alert is received, then the garbage collector has to come and collect the garbage.
O The current weight and the garbage distance is to be updated Periodically. i.e, for 5 minutes.

Webpage code:

```html
<!DOCTYPE html>
<html>

<head>
  <style>
    .container{
      text-align: center;
      border: 7px rgb(255, 255, 255);
      width: none;
      height: none;
      padding-top: 100px;

    }
    .smartbin{
      align-items: center;

    }

  </style>

    <div id="map"></div>
    <div id="alert_msg"><a href="rr.html" target="_blank">ALERT MESSAGE!</a></div>
    </div>
  </div>
  <div class="container">
```

```
<center><a href="https://g.page/sairamengg?share"
  type="button" class="btn btn-dark">SMART BIN</a></center></div>
  <form>

    Distance:<input type="text" name="Distance" value="180">
    Weight:<input type="text" name="Weight" value="1kg">

  </form>
  <div class="smartbin">
    <img src="Waste-Segregation-1024x398.png" alt="Waste segregation">
  </div>

  <script
    src="https://maps.googleapis.com/maps/api/js?key=AIzaSyBBLyWj-3FWtCbCXGW3ysEiI2fDfrv2v0Q&callback=myMap"></script></div>

</body>

</html>
```
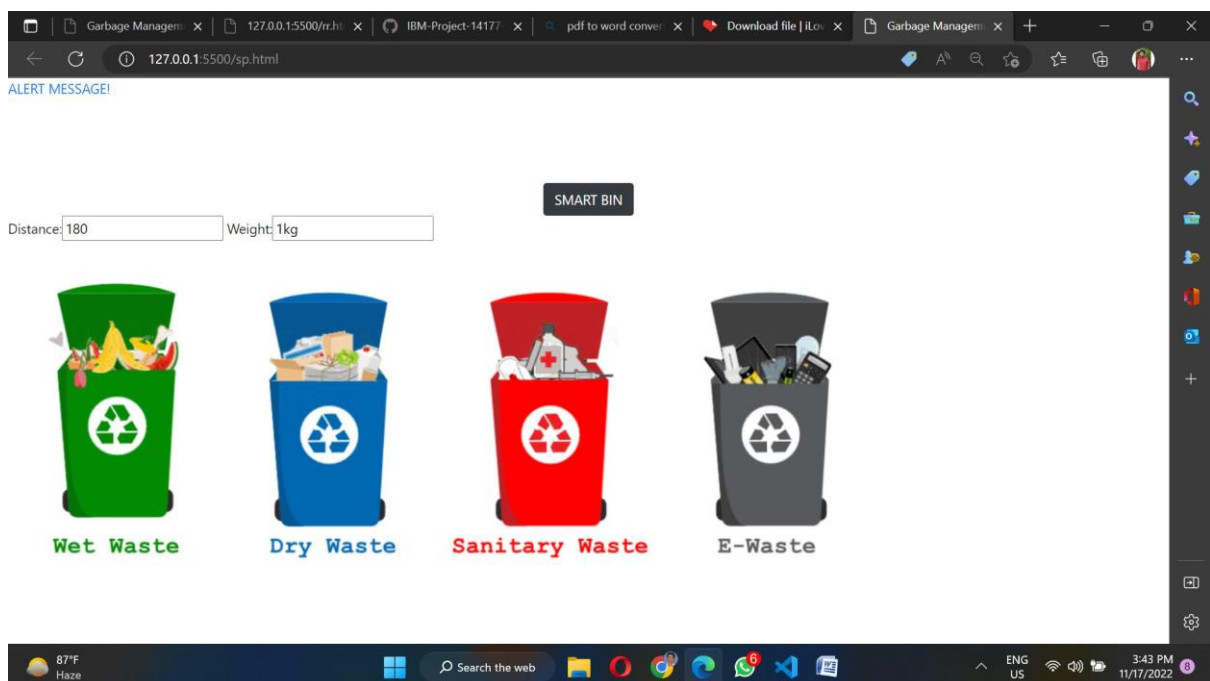

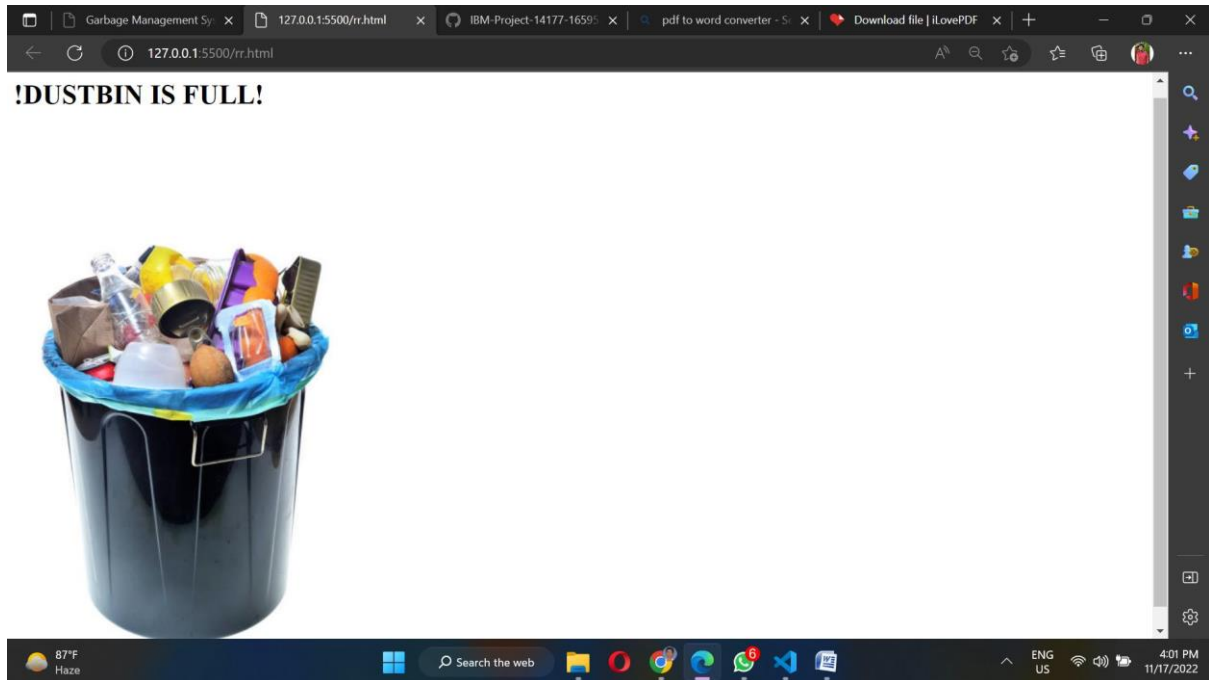

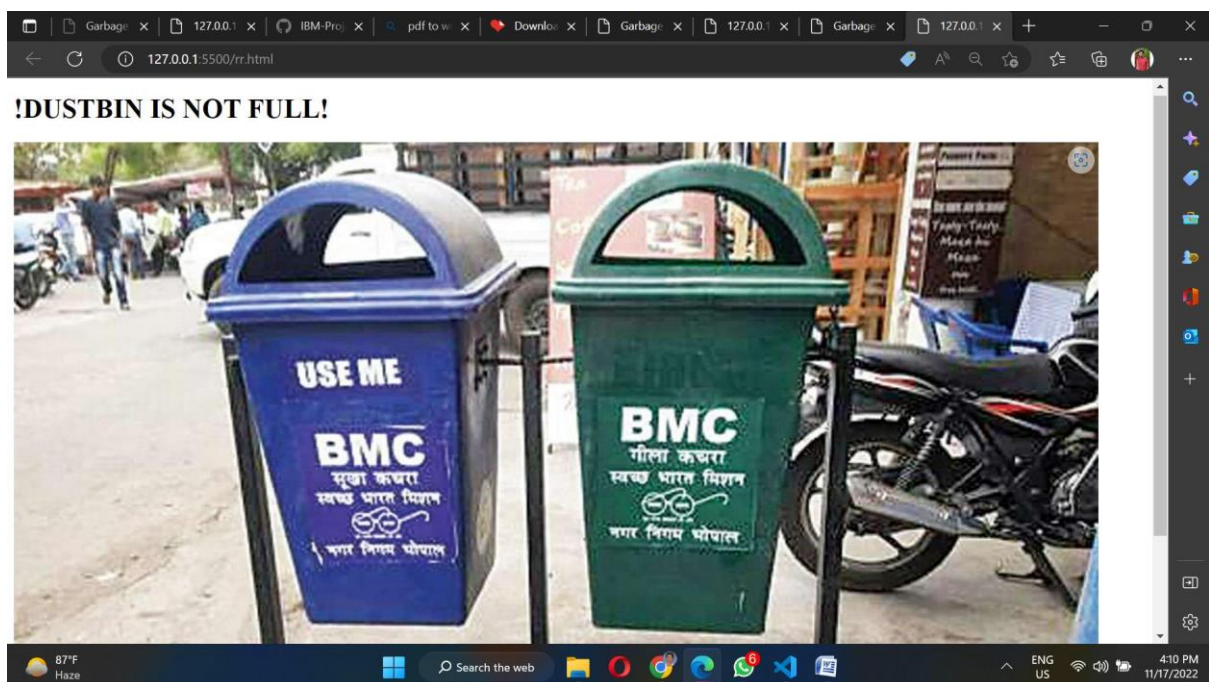

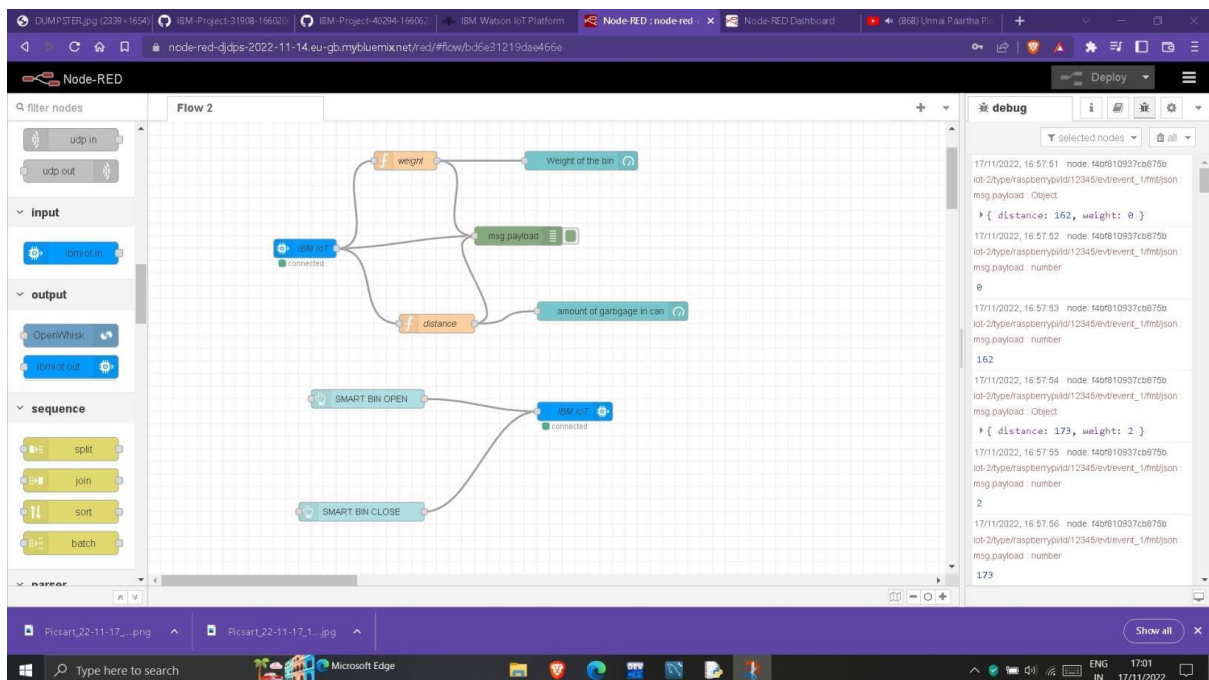

OUTPUT:

When you click the smartbin button it will show the exact location where the garbage can is filled.

When dustbin is filled:

When the smartbin is filled the alert message will be sent to the garbage collector along with the exact location with its co-ordinates .

When the garbage is not filled upto 90% the smartbin is ready to collect the garbage.

We are sending the data of the garbage can with help of Node-red and IoT cloud
which composed of the value equal to the weight of the garbage can and the
distance of garbage present in the can.
